

SPECIALIST HEAVY LIFT PROVIDER

OM heavylift will provide the largest permanent quay side crane in the UK at Dundee Port

Gottwald MK 1500
A 58m boom...

OM HEAVY LIFT's practical and professional approach utilises the depth of experience and knowledge of our team to provide solutions for our clients. We work closely with our clients to deliver reliability and performance.

We review and analyse every aspect of the lifting operation to provide safe and practical outcomes for all lifting and transport operations.

OM HEAVY LIFT have the largest permanent quay side crane in the UK at Dundee Port - A Gottwald Mk1500. It is the largest fixed quayside crane in the UK. Its scale is such that with a 58m boom it can lift 875 Tonnes from the centre of a barge or vessel.

A permanent crane removes mobilisation charges which can be significant. Market leading day rates will enable Dundee port to attract decommissioning and renewables construction as it will be considerably cheaper as craneage represents a significant element of the onshore processing cost.

A further attraction of Dundee along with the new quay and the heavy lift crane is the 25 hectares of lay down area immediately adjacent to the heavy lift crane pad.

OM Heavy will offer alternative methods and models to ensure Dundee port leads the way in the Re-use / equipment market as well as offering fixed price options for all projects along-side Dundee port.

The combination of the physical attributes of the port and the commercial advantage delivered by the crane will ensure projects currently lost to Scotland can now be more competitively tendered and won.

Heavy crane capability is also considered to be a significant attraction for offshore wind developments in the medium term, 2020 and beyond.

OM Heavy lift also owns and operates a fleet of other crawler cranes:

- NCK Olympus HC170 (170 tonne)
- NCK Ajax HC75 (75 tonne)
- American Skyhorse 11250 (400 tonne)

Significant Jacking, skating and torqueing equipment
Rigging, spreader beams, ballast weights etc.

In addition, the group owns and manages our Forfar storage facility:

- Located near the A90 trunk road at Forfar, easily accessible for Aberdeen, Dundee and Montrose
- The site includes 6 acres of hard standing and 55,000 sq ft. of internal storage, along with office space
- The site is secure and manned during normal working hours
- Handling equipment includes 1 x 2.5Te forklift, 1 x 7Te forklift, 1 x 20Te forklift and an 75Te crane based on site at Forfar
